

10. pedestrian directionals

destinations

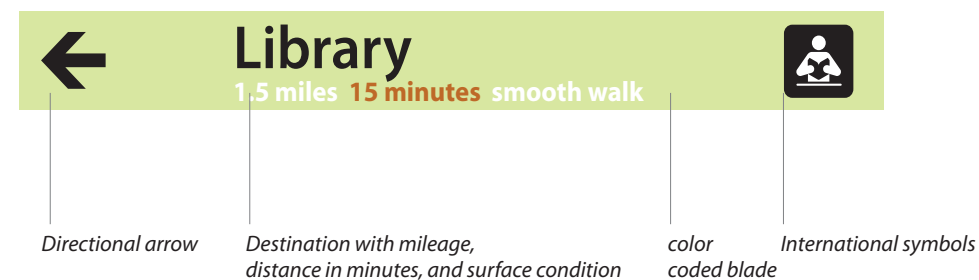

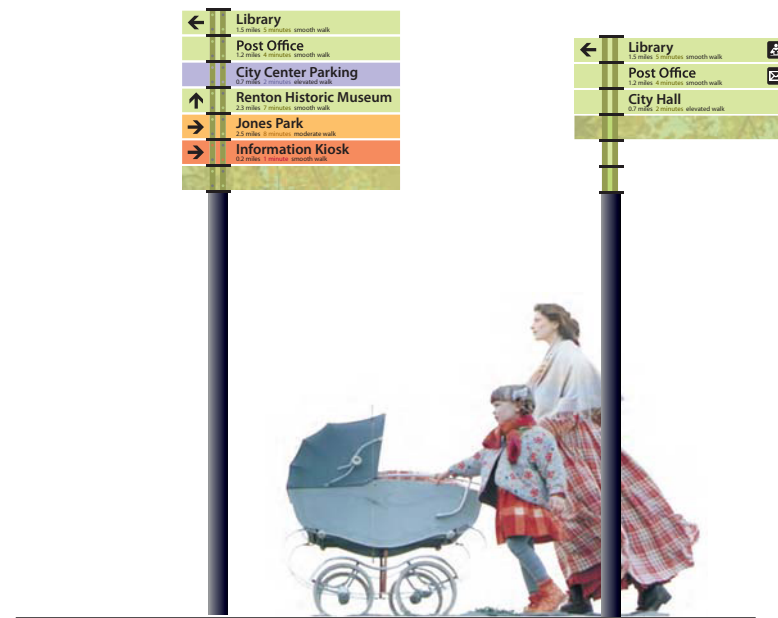

The pedestrian directional system uses a color palette to reflect the different destinations. Green (the system color) is used for general destinations, blue for parking areas, yellow for recreational facilities, and red for emergency/first aid.

The structure of the directional system is build within the post of the sign. As additional messages are added over time, the structure can be raised out of the post and additional blades can be inserted.

color

In addition to the directional blades, a textural blades is added to the bottom of the finger sign to add to the identity of the area.

location

Pedestrian directional signs are located within the downtown boundary.
